

Automated Network Request Management

Project Details

Field	Details
Date	30 July 2026
Team ID	Individual/Solo Project
Project Name	Automated Network Request Management in ServiceNow
Student	Lella Praneeth
Maximum Marks	2 Marks

Project Description

Automating network request management in ServiceNow enhances operational efficiency by streamlining workflows, reducing manual interventions, and ensuring real-time updates. Implement a fully automated and scalable network change management process in ServiceNow to automate user-initiated network requests, ensuring rapid fulfillment, audit-ready change records, and accurate configuration tracking.

Project Phases

- **Phase-1:** Requirement Analysis & Planning
- **Phase 2:** Backend Development & Configurations
- **Phase 3:** UI/UX Development & Customization
- **Phase 4:** Data Migration, Testing & Security
- **Phase 5:** Deployment, Documentation & Final Presentation
- **Project Conclusion**

Ideation Phase

Define the Problem Statements

Customer Problem Statement Template:

Create a problem statement to understand your customer's point of view. The Customer Problem Statement template helps you focus on what matters to create experiences people will love.

A well-articulated customer problem statement allows you and your team to find the ideal solution for the challenges your customers face. Throughout the process, you'll also be able to empathize with your customers, which helps you better understand how they perceive your product or service.

Applied to This Project

PS	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	an employee who needs network access or firewall changes to do my job	request and get the network changes implemented quickly	I have to email IT and wait days without knowing the status	there is no standard system to submit, track, or approve network requests	frustrated and unproductive
PS-2	a manager who approves network change requests for my team	review and approve or reject requests quickly and with full context	approvals happen informally over chat/ email with no record or SLA	there is no structured, auditable approval workflow tied to the request	uncertain and accountable without visibility
PS-3	an IT administrator who fulfills and tracks network configurations	verify security policies and deploy network changes correctly the first time	changes and configurations are tracked manually in spreadsheets prone to errors	network asset management and topology are not integrated with the request process	overworked and at risk of compliance issues

Summary

Across all three perspectives, the common root cause is the absence of a standardized, automated system for requesting, approving, and fulfilling network changes. This validates the need for a ServiceNow Service Catalog solution that gives employees a self-service request experience, gives managers a clear and auditable approval workflow, and gives IT administrators integrated tracking and automated deployment.
